**BROADPOINT EXPANDS CELLULAR COVERAGE  
INTO GULF OF MEXICO DEEPWATER**

*Offshore communications provider enhances customer access and mobility,  
prepares for future growth despite recession*

**HOUSTON (April 29, 2009)** – Broadpoint, a full-service telecommunications and network solutions company, has increased its number of cellular sites in the Gulf of Mexico by more than 30 percent, and will continue an aggressive schedule to add additional sites through the end of this year. In addition to expanding its core network, Broadpoint has made technology upgrades to its remote customer premise equipment and product offerings. This strategic initiative, which began in October 2008, is designed to offer Broadpoint customers the largest and most reliable cellular GSM service available offshore, featuring better voice quality and a higher level of data throughput.

The upgrades and additions to Broadpoint's cellular network were made to improve service in highly trafficked areas and to add coverage in several new locations. As part of the expansion, the company now provides telecommunications service and network coverage in the Gulf's deepwater areas for the first time, where rapid growth and development are predicted for offshore companies in the coming months and years.

“By improving our overall network performance and expanding into new territories in the Gulf of Mexico, Broadpoint is able to increase the efficiency of our customers’ communications and

data transfer abilities, which translates into a vast improvement in their day-to-day lives,” said Bryan Olivier, Chief Operating Officer, Broadpoint. “The expansion into deepwater territories is a tangible benefit for our customers and addresses the oil and gas and maritime industries’ need for a seamless network for mobile vessels operating in all areas of the Gulf.”

With a coverage area exceeding 100,000 square miles in the Gulf, Broadpoint operates the largest offshore cellular GSM network in the market today. The enhanced network performance is complemented by Broadpoint’s 24/7 customer service team, which provides critical support to its wide range of customers both on and offshore.

“At Broadpoint, our goal is to always enhance our customers’ experience by providing them with the resources and services they need to increase productivity,” said Errol Olivier, Chief Executive Officer, Broadpoint. “Despite these difficult times, it is Broadpoint’s top priority to continually improve upon the products and services we offer.”

###

#### *ABOUT BROADPOINT*

*Broadpoint’s experienced professionals and complete range of telecommunications and network solutions allow companies around the world to maximize their productivity in challenging remote environments. The company provides sophisticated cellular, satellite and 2-way radio communications; custom-engineered and emergency solutions; and antenna and tower services; as well as broadcast support solutions ranging from simple uplinks to integrated satellite and fiber solutions. Broadpoint operates and maintains the first GSM/GPRS/Edge offshore wireless network, which covers more than 100,000 miles in the Gulf of Mexico.
