

Cellular equipment.

First digital cellular network in the Gulf of Mexico.

With a coverage area of more than 100,000 square miles, Broadpoint is the leading cellular service provider in the Gulf of Mexico. Our cellular network provides seamless coverage throughout the Gulf region and, thanks to extensive roaming agreements, our system is fully compatible with others across North America. Connect and Deliver with Broadpoint cellular.

Broadpoint provides highly reliable cellular equipment and innovative cellular plans for businesses and organizations operating in the Gulf of Mexico. Since 1976, Broadpoint has earned a reputation for delivering outstanding technology and highly trained service technicians. No communications company is working harder to help its customers stay connected and productive offshore and onshore.

Cellular products.

Broadpoint EDGE Ethernet Device

Broadpoint EDGE Ethernet Device provides high-performance Ethernet connectivity for email service and Internet access. It utilizes General Packet Radio Service (GPRS) and Enhanced Data rates for GSM Evolution (EDGE) to offer an easy-to-deploy and cost-effective data communication. Benefits of the EDGE Ethernet Device include instant deployment, the ability to traverse firewalls and connection portability to virtually anywhere.

Broadpoint Amplified Digital Case Phone

This portable digital cell phone system is supplied with an amplifier that enhances communications offshore. This packaged system solves communication challenges without expensive satellite hardware and airtime. It comes in a heavy-duty custom molded splashproof case.

Broadpoint Digital Bag Phone

A robust, powerful, feature-rich, fully integrated bag phone to keep communication lines open in the most remote locations. Now professionals in the oil & gas and public safety industries can stay connected with complete mobility solutions.

Broadpoint EDGE Voice and Fax (EVF) Unit

The fixed EDGE Voice and Fax (EVF) unit provides wireless connectivity for standard telephone and analog fax service. This device provides voice, circuit-switched data, circuit-switched fax and optional analog fax capability. It features Caller ID, Call Waiting, Call Hold and Call Forwarding. Moreover, it incorporates 7 LEDs for message alert, device status and signal strength.

Rugged Class 1 Div 2 Safe Phone

Broadpoint presents the first safe, rugged wireless phone for Class 1 Div 2 hazardous areas as defined by National Electric Code. Manufactured by a leading provider of certified-safe devices for oil, gas and chemical industries, this wireless phone works everywhere in the world where GSM wireless service is available.

TracPoint™ Device

This hardware component of the TracPoint™ solution features high-accuracy GPS positioning with rapid acquisition of satellites. It communicates to the hosting system via GPRS at 850, 900, 1800 and 1900 Mhz frequencies. It is capable of storing large amounts of data on board and can optionally take in five discrete inputs.

AirCard® 875U USB Wireless Modem

This equipment is packaged in a stylish, compact form. The AirCard 875U USB modem can plug directly into any USB port or can be connected via the docking cradle. Compatible with both Microsoft Windows and Mac OS X operating systems, the AirCard 875 USB modem offers customers an alternative to both PCMCIA and ExpressCard solutions.

EDGE Single Unit (ESU)

Broadpoint's EDGE Single Unit (ESU) is a light, compact and easy-to-use device that delivers outstanding voice quality and fast Internet access in the Gulf of Mexico. To provide Internet access, the ESU utilizes state-of-the-art EDGE technology and interfaces with a computer through a standard Ethernet connection. It also features analog fax, voice mail, Caller ID, Call Waiting, Call Hold and Call Forwarding. The ESU incorporates LEDs for message alert, device status and signal strength. The dual unit version of this product, EDGE Dual Unit (EDU), delivers an extra phone line.
