

## Custom solutions.

Thinking outside the dish.

When you need more than our extensive set of standard satellite solutions, our experienced engineers can design, configure, deploy and manage a custom solution involving satellite, cellular, microwave and other wireless technologies.

Broadpoint provides highly reliable satellite and cellular communications, including a wide range of conventional and custom satellite solutions. Some of the largest and most progressive companies in the world depend on Broadpoint's technology and expertise for far-reaching and critical communications capabilities. All services are backed by a world-class technical support and engineering team. Since 1976, Broadpoint has earned a reputation for delivering outstanding technology and highly trained professional service technicians. No communications company is working harder to help its customers stay connected and productive onshore and offshore.

- Custom star or mesh networks
- Site survey/system evaluation
- Dedicated or shared bandwidth
- 24x7 customer support
- Satellite, cellular, microwave technology
- Project management and engineering services

For more information about our products and services, please call 1.800.458.8301 or visit [www.broadpointinc.com](http://www.broadpointinc.com)

## Custom solutions.

Broadpoint's engineers design custom solutions focused on ironclad reliability. Count on Broadpoint to deliver the solution that best meets your communications needs, whether that's an international broadband hub facility, a device operating on our industry-leading cellular network, or anything in between.

## Services

Broadpoint's engineering design team specializes in IT architecture, satellite hardware and signaling, RF propagation, application integration and project management.

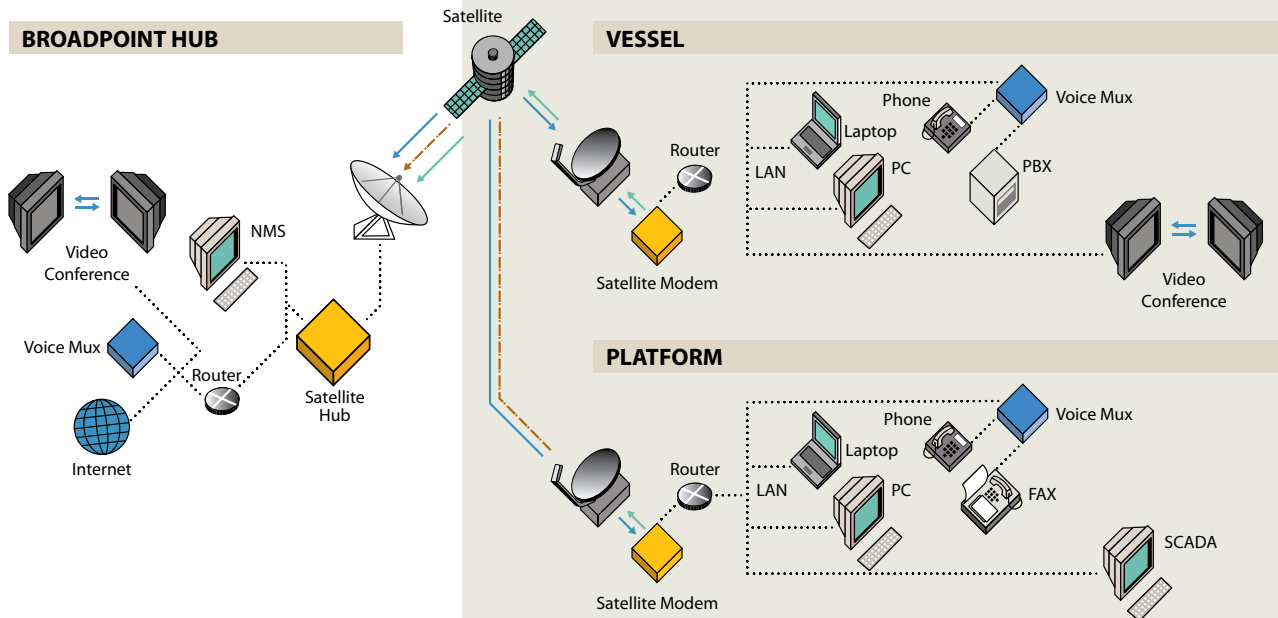

After learning about your telecommunications and network needs and constraints, we offer a preliminary design tailored to your specifications. We develop a bill of materials, drawings and a scope of work. Once the project is approved, our project management team coordinates the implementation. Following installation, we remain available to address issues related to everything from product and network performance to system licensing.

## Cellular technologies

Let us apply our nearly two decades of experience in designing and operating the world's first GSM offshore network to solve your most challenging communications problems.

## VSAT technologies

Broadpoint has the engineering skills and experience to deliver sophisticated VSAT solutions, whether you need an SCPC land-based, single-node fixed-site or a fleet-wide fully meshed, deepwater frame-relay network.
